STATSports®

Apex Team Series

The Most Powerful Performance Analysis Device Ever Developed

MARKET LEADERS

Designed with input from leading practitioners at the world's biggest sporting institutions, the STATSports Apex device is the most advanced athlete monitoring device ever developed. Complete with MAPPS technology, the Apex device offers unrivalled accuracy and reliability in even the most challenging stadia environments. Apex is used by the most recognisable brands in club and international soccer such as Liverpool FC, PSG, Brazil FA and U.S. Soccer Federation.

APEX FEATURES
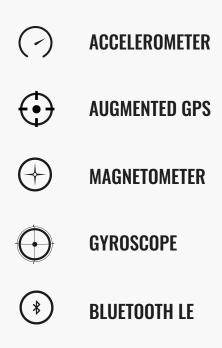

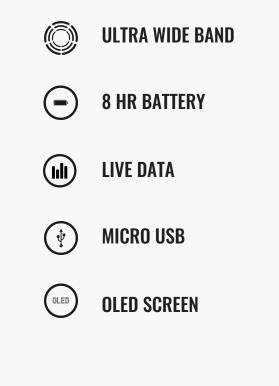

ACCELEROMETER

AUGMENTED GPS

MAGNETOMETER

GYROSCOPE

BLUETOOTH LE

ULTRA WIDE BAND

8 HR BATTERY

LIVE DATA

MICRO USB

OLED SCREEN

FEATURES/PRACTICAL APPLICATIONS

With the ability to stream live data wirelessly from the Desktop app, practitioners can now monitor individual and team loads in real-time using with an intuitive user-interface.

Live drills can be easily generated for multiple players/groups as appropriate, with instantaneous feedback updated as each drill elapses, while data from completed drills can be recalled at any time.

Apex Live enables coaches to set thresholds for players during various sessions types (MD-2, Rehab, etc.). The ability to view thresholds in real-time allows users to make informed decisions to ensure the targeted load during a session is achieved.

REPORTING

Apex offers a range of options for users to export their data to external data management systems or spreadsheets.

PDF Reports – allow for comparison between players/positions/training weeks/games for metrics that the user believes to be most relevant to them. The ability to create multiple different templates within this feature allows the user to create tailor-made reports based on the recipient.

CSV Export – customisable excel exports that display the users preferred metrics. Ability to mass produce individual excel files for multiple players across multiple sessions at the click of a button.

Raw Data – the Apex software allows for full accessibility to raw data for every player across every session providing millions of data points that can be exported in a matter of seconds directly to a CSV file. Practitioners may wish to export raw data from their GPS devices and process this data independently, as benefits of doing so include removing unwanted algorithms, adding additional algorithms, including new metrics, or for retrospective analysis of peak intensities of matches using rolling periods.
